PRECISION MACHINING

GENERAL INFORMATION

Precision machining is a modern manufacturing facility specializing in high-precision machining of complex machine and mechanical components. Equipped with advanced CNC technologies, the facility provides a wide range of precision machining services for various industrial sectors.

PROCESSING SERVICES

- Milling/Lathes 3–5 axes
- Vertical and horizontal turning
- Transmission machinery
- Erosion machines
- Bending up to 120 mm

PRODUCTION CAPACITY

ALL PRODUCTION AREAS:

10 000 tons/year

GALVANIZING SERVICES:

20 000 tons/year

PRODUCTION AREAS

Engineering technological unit
Tooling and design support service
Mechanical processing
Processing of special-purpose gears
Electro-erosion processing area
Assembly area

SECTORS

Oil and Gas
Agriculture
Construction
Industry

EQUIPMENT

“MAZAK”

41 pieces
JAPAN

“GLEASON”

18 pieces
FRANCE

EXPORT

- Russia
- Turkiye
- Hungary
- USA
- France

OUR STRENGTHS AND ADVANTAGES

The equipment produced at the plant consists of the following:

- **3–5 axis CNC** lathes and milling machines, horizontal and vertical machining centers, CNC electrical discharge machining (EDM) machines, grinding machines, gear milling machines, sawing machines, deep-hole drilling machines
- Coordinate Measuring Machines (CMM)
- Cutting tools

The plant manufactures a wide variety of technological equipment and fixtures, components and assemblies for all available types of gear transmissions, along with large-dimension shaft-type and prismatic parts.

These include:

- Casting molds and press molds for products made of plastics, rubber, glass, and various non-ferrous metals
- Dies (cutting, bending, forming)
- Housing components (in various dimensions)
- Stepped, splined, and gear shafts (in various dimensions)
- Cylindrical gears, bevel gears, worm gears, Novikov-type gears, hypoid gears etc.
- Tooling components

TECHNICAL CAPABILITIES OF PRECISION MACHINING PLANT EQUIPMENT

UP TO **70%**

of raw material
purchases are
sourced from local
manufacturers.

The mold, press die, and stamping assembly unit is intended for the assembly of different types of molds, press dies, and stamping tools. The deep-hole drilling machine in this facility is capable of machining water channels in molds and press dies with diameters of **Ø10–15 mm** and lengths up to **750 mm**.

Plant units and areas

- Design and engineering and technological unit
- Tooling and design support service
- Mechanical processing areas: milling, turning
- Processing of special-purpose gears
- Electro-erosion processing area
- Assembly area

EQUIPMENT

MAZAK

The lathe section for precision machining of equipment and components is equipped with **“MAZAK”** lathes from Japan. These machines allow turning operations on workpieces with diameters up to 3,500 mm and lengths up to 6,000 mm.

The dimensions of raw materials that can be machined on **“MAZAK”** lathes, depending on the lathe type, are as follows:

- Ø51mm, L=130mm
- Ø280mm, L=309mm
- Ø420mm, L=1538mm
- Ø580mm, L=1000mm
- Ø920mm, L=6064mm
- Ø340mm, L=385mm
- Ø3500mm, L=1800mm
- Ø320mm, L=530mm
- Ø380mm, L=550mm
- Ø580mm, L=3000mm
- Ø670mm, L=1354mm
- Ø920mm, L=4069mm
- Ø658mm, L=995mm

The milling section for precision machining of equipment and components is primarily equipped with **“MAZAK”** milling machines from Japan. These machines are capable of performing milling operations on workpieces with dimensions of 3,750 × 10,000 mm, height 1,750 mm, and weight up to 43 tons.

The dimensions of raw materials that can be machined on **“MAZAK”** milling machines, depending on the milling machine type, are as follows:

- 3750x10000mm, H=1750mm, 43000kg
- 1740x700mm, H=770mm, 2000kg
- 1300x510mm, H=570mm, 1200kg
- 1380x750mm, H=600mm, 1200kg
- Ø730, H=500mm, 500kg
- Ø3500mm, H=1800, 9500kg(10050kg)
- Ø1450mm, H=1450mm, 2200kg
- Ø1050mm, H=1300mm, 1500kg
- Ø630mm, H=900mm, 400kg

EQUIPMENT

GLEASON

The special-purpose gear processing section is equipped with gear milling and gear hobbing machines from **GLEASON**, USA.

Depending on the type of equipment, it is possible to perform gear processing and hobbing operations on workpieces with diameters up to **Ø1,200 mm**.

MITSUBISHI

In the grinding and erosion processing section, **Mitsubishi** EDM machines from Japan are installed, including:

- **Wire EDM** (max workpiece **300 × 300 × 250 mm**)
- **Hole Drilling EDM** (max **400 × 250 × 240 mm**)
- **Die-Sinking EDM** (max **400 × 300 × 300 mm**)

QUALITY CONTROL

The following inspections and tests are conducted in our company's production and service units.

- Visual inspection of weld seams
- Certification tests for welders
- Various tests in painting and coating departments
(Paint application test, Adhesion test, Solubility test, Cross cut test, Dust assessment)
- Geometrical measurements of machined parts and metal structures
(with micron-0.001 mm accuracy)
- Non-destructive testing (MT, PT, UT)
- Hardness test
- Roughness test

At the same time, our products are supplied with certificates confirming compliance with relevant standards.

info@stp.az / sales@stp.az

STP collaborates with companies across various sectors through its industry-compliant production capabilities and quality-driven approach.

Our technologically advanced equipment and adaptable production infrastructure empower us to offer partners high-quality, functional solutions.

Our proven systems and skilled specialists ensure that every partnership is built on a reliable and trustworthy basis.

If stability and functionality are your priorities in manufacturing, partnering with STP may be the right choice.

Equipment

**74 milling
machines and lathes**

**18 Gleason
machines (France)**

Hydraulic press machines
with capacities from
50 to 3,200 tons
